

IVAN SHABANOV

Senior Design Engineer, Embedded Agreements • React / TypeScript • MCP, AI Agents & Claude Code • Design Systems & DX

Yerevan, Armenia (GMT+4) • Remote • B2B contract or EOR • Full overlap with EU hours

ivan@ishbnv.dev • +374 77 719 518 • linkedin.com/in/ishbnv • github.com/ishbnv • ishbnv.dev

SUMMARY

Senior Design Engineer with 4+ years shipping production React/TypeScript interfaces and developer tooling, and 3 years building AI-native workflows: custom MCP servers over schemas and internal APIs, project rules for Claude Code, and visual workflow builders. Bridges product design and engineering end to end: prototypes from Figma concepts to production-grade React components in days with deep attention to layout, accessibility, Core Web Vitals, and developer experience. Led a 3-engineer team to launch a profitable credit-report product in week one (+40% net profit) and automated push campaigns generating ~\$80K/month.

EXPERIENCE

Alfa-Dengi via GIDFINANCE — Senior Full-Stack Engineer • Tech Lead

Sep 2024 – Present • 2 yrs • Remote

Consumer-lending marketplace with 9K+ new leads a day. Cross-functional product team; contract engagement via GIDFINANCE.

- Made AI coding agents a team-level capability: wrote the **project rules for Claude Code** (architecture conventions, style, security guardrails), built **custom MCP servers** exposing the database schema, task tracker, and documentation to agents, added an agentic pre-review stage ahead of human review, and trained the team; a typical CRUD module with tests now takes **~40 min instead of ~2 h**.
- Enabled non-technical marketers to launch automated multi-step campaigns **with zero engineering involvement** (~\$80K/month generated) by designing and shipping a visual drag-and-drop campaign canvas on React and NestJS with normalized state, live validation, and per-status frequency caps.
- Launched a credit-report product that **turned profitable in its first week** (net profit +40%, EPC doubled from ~\$1.9 to ~\$3.8) by leading a 3-engineer team through technical design, user flows, API contracts, the NBKI credit-bureau API integration, and a Node.js backend over a **6M-row** scoring dataset.
- Eliminated notification loss** under peak load by moving notification delivery and domain-event processing to **Apache Kafka**; application status updates reach the UI in real time over **WebSocket** on top of those events.
- Cut load time of a 100K-row lead-scoring table (9K+ new leads/day) from **8 s to under 1 s** by reworking the data-access path: server-side pagination, PostgreSQL query and index optimisation, and client-side list virtualization.

Appbooster — Full-Stack Engineer (contract)

Nov 2023 – Aug 2024 • 10 mos • Remote

Mobile-app marketing platform: ~100 employees, 10,000+ apps promoted for clients in 26 countries.

- Grew the task-and-rewards product to **1,000 daily active users in 3 months** by owning the full cycle: React user dashboard for paid tasks and proof submission, chatbot re-engagement notifications, and a live verification queue for admins.
- Made **100% of payouts auditable** and screened out duplicate and faked proofs by modelling the full task lifecycle from pick-up to payout behind a moderation queue with anti-fraud rules, processing **hundreds of completions a day**.

SODA — Full-Stack Engineer

Aug 2022 – Oct 2023 • 1 yr 3 mos • Remote

Lead-generation agency for residential developers and law firms (~60 employees). Owned the client-server side: APIs, database, interfaces.

- Built an internal **React integration hub** linking the agency's CRM with external partner CRM systems, managing API contracts, data mappings, and bidirectional synchronization across distributed endpoints.
- Tripled monthly channel revenue from ~\$47K to ~\$141K** and cut lead response time from ~8 min to **under 30 s** by leading an AI lead-processing assistant; a 3-month controlled comparison (humans / humans + AI / AI only) moved the channel fully to AI.
- Cut LLM API costs 10×** on own initiative by prototyping, measuring, and shipping a model cascade: a fast, cheap model handles routine leads and escalates to a stronger model only on low confidence.
- Lifted conversion **~1.5×** on SPA sites receiving paid ad traffic by raising Lighthouse Performance from **58 to 87** through Core Web Vitals optimisation, asset loading, and layout stability.

OPEN-SOURCE PROJECT

vk-ai-bot-platform (MIT) — multi-tenant AI chatbot platform: OpenRouter LLM API, per-community prompt versioning, token-aware context windows, multi-step re-engagement workflows on BullMQ, event deduplication, admin analytics. TypeScript, Fastify, Drizzle ORM, PostgreSQL, Redis, React, Docker Compose, GitHub Actions.

SKILLS

Design Engineering & DX: Figma to code, design systems, UI components, interaction design, developer experience (DX), API and integrations design, documentation UX, visual workflow builders, accessibility (a11y), Core Web Vitals, Lighthouse

AI & Agentic Workflows: Claude Code (project rules, reusable skills, agentic pre-review), Cursor, MCP (Model Context Protocol) custom servers, AI agents, agentic workflows, LLM integration (Anthropic API, OpenAI API, OpenRouter), model cascading and routing, prompt engineering

Frontend: React, TypeScript, Next.js, Redux Toolkit, Ant Design, Feature-Sliced Design, Vite, Webpack, modern CSS, WebSocket and real-time UI

Backend & APIs: Node.js, NestJS, Express, Fastify, REST APIs, GraphQL, WebSocket, Prisma ORM, Drizzle ORM, microservices, Apache Kafka, BullMQ, system design

Data & Infrastructure: PostgreSQL, Redis, Docker, Kubernetes, AWS, GitLab CI/CD, GitHub Actions, OpenTelemetry, Grafana

Testing & Process: Playwright (E2E), Vitest, Jest, Supertest, code review, Agile/Scrum, technical documentation, mentoring and team training

EDUCATION & LANGUAGES

Southern Federal University — Applied Informatics, 2022–2024

English — professional working proficiency (daily in a distributed team) • Russian — native
