SUMMARY

Senior Frontend Engineer with 4+ years shipping production React 18+ and TypeScript applications across revenue-critical fintech products. Deep expertise in the Redux Toolkit ecosystem, complex state machines, and frontend performance: built a visual drag-and-drop workflow canvas generating ~\$80K/month, slashed load times on a 100K-row dataset from 8 s to under 1 s via virtualization and re-render control, and raised Lighthouse Performance from 58 to 87 (+50% conversion). Champions secure frontend architecture (OWASP Top 10), robust unit/component testing, and AI-native developer workflows.

EXPERIENCE

Alfa-Dengi via GIDFINANCE — Senior Full-Stack Engineer • Tech Lead

Sep 2024 – Present • 2 yrs • Remote

Consumer-lending marketplace with 9K+ new leads a day. Cross-functional product team; contract engagement via GIDFINANCE.

- Enabled marketers to launch automated multi-step campaigns **with zero engineering involvement (~\$80K/month generated)** by designing and building a visual drag-and-drop campaign canvas on React and NestJS with normalized Redux Toolkit state, live validation, and per-status frequency caps.
- Cut load time of a 100K-row lead-scoring table (9K+ new leads/day) from **8 s to under 1 s** by reworking the data-access path: client-side list virtualization, server-side pagination, and PostgreSQL query and index optimisation.
- Launched a credit-report product that **turned profitable in its first week** (net profit **+40%**, EPC doubled from **~\$1.9 to ~\$3.8**) by leading a 3-engineer team through user flows, technical design, Web API contracts, and responsive UI delivery.
- Delivered real-time status and notification updates directly to the React UI over **WebSocket** backed by **Apache Kafka** domain events, eliminating message loss under peak traffic bursts.
- Automated team delivery and DX: authored **project rules for Claude Code** (architecture conventions, security guardrails) and built **custom MCP servers** exposing database schemas and documentation, cutting CRUD module delivery from **~2 h to ~40 min**.

Appbooster — Full-Stack Engineer (contract)

Nov 2023 – Aug 2024 • 10 mos • Remote

Mobile-app marketing platform: ~100 employees, 10,000+ apps promoted for clients in 26 countries.

- Grew the task-and-rewards product to **1,000 daily active users in 3 months** by owning the full frontend cycle: React user dashboard with optimistic updates for paid tasks and proof submission, chatbot re-engagement notifications, and an admin verification queue.
- Made **100% of payouts auditable** and screened out duplicate and faked proofs by modelling the full task lifecycle from pick-up to payout behind a moderation queue with anti-fraud rules, processing **hundreds of completions a day**.

SODA — Full-Stack Engineer

Aug 2022 – Oct 2023 • 1 yr 3 mos • Remote

Lead-generation agency for residential developers and law firms (~60 employees). Owned the client-server side: APIs, database, interfaces.

- Lifted conversion **~1.5x** on high-traffic SPA web applications by raising Lighthouse Performance from **58 to 87** through Core Web Vitals work, asset preloading, layout stability, and re-render profiling.
- **Tripled monthly channel revenue from ~\$47K to ~\$141K** and cut lead response time from ~8 min to **under 30 s** by leading an AI lead-processing assistant across a 3-month controlled trial with a real-time chat interface.
- Built an internal **React integration hub** linking the agency's CRM with external partner CRM systems, managing API contracts, data mappings, and bidirectional synchronization across distributed endpoints.

OPEN-SOURCE PROJECT

vk-ai-bot-platform (MIT) — multi-tenant AI chatbot platform: OpenRouter LLM API, token-aware context windows, multi-step re-engagement workflows on BullMQ, event deduplication, AES-256-GCM token encryption at rest. TypeScript, Fastify, Drizzle ORM, PostgreSQL, Redis, React, Docker Compose, GitHub Actions.

SKILLS

Frontend & State Management: React (18+), TypeScript (5+), JavaScript (ES6+), Next.js, Redux Toolkit (normalized state, slices, listeners), state machines, component architecture, HTML5, CSS3, Material UI, Ant Design

Architecture, APIs & Security: Frontend architecture, REST APIs, Web API design patterns, GraphQL, WebSocket (real-time UI), microservices, OWASP Top 10 security practices, input validation, secure token handling

Performance & Optimization: Frontend performance optimization, list virtualization, re-render control, bundle size reduction, Core Web Vitals, Lighthouse, cross-browser compatibility

Testing & Process: Unit testing, integration testing, component testing, Vitest, Jest, React Testing Library, Playwright (E2E), code review, Agile/Scrum, technical documentation

Data & Infrastructure: Node.js, PostgreSQL (query and index optimization), Redis, Apache Kafka, BullMQ, Docker, Kubernetes, AWS, GitLab CI/CD, GitHub Actions

AI & Developer Tooling: Claude Code (project rules, security guardrails), MCP (Model Context Protocol) custom servers, Vite, Webpack, Git (code reviews, workflows)

EDUCATION & LANGUAGES

Southern Federal University — Applied Informatics, 2022–2024

English — professional working proficiency (daily in a distributed team) • Russian — native
