SUMMARY

Senior Backend Engineer with 4+ years building high-load Node.js and TypeScript distributed services: NestJS, Express, PostgreSQL, Redis, Apache Kafka, Kubernetes, and AWS. Cut a 100K-row scoring query from 8 s to under 1 s, eliminated message loss at peak traffic with Kafka, and designed the GitLab CI/CD pipeline deploying to a 5-node Kubernetes cluster with OpenTelemetry tracing. Led a 3-engineer team on a credit-bureau integration profitable in week one (+40% net profit). AI-native engineer: built custom MCP servers and team-level coding agent rules.

EXPERIENCE

Alfa-Dengi via GIDFINANCE — Senior Full-Stack Engineer • Tech Lead

Sep 2024 – Present • 2 yrs • Remote

Consumer-lending marketplace with 9K+ new leads a day. Cross-functional product team; contract engagement via GIDFINANCE.

- Cut load time of a 100K-row lead-scoring table (9K+ new leads/day) from **8 s to under 1 s** by reworking the data-access path: server-side pagination, PostgreSQL query and index optimisation, and client-side list virtualization.
- **Eliminated notification loss** under peak traffic bursts by moving notification delivery and domain-event processing to **Apache Kafka**, establishing fault-tolerant, replayable event streaming.
- Launched a credit-report product that **turned profitable in its first week** (net profit **+40%**, EPC doubled from **~\$1.9 to ~\$3.8**) by leading a 3-engineer team through technical design, user flows, API contracts, the NBKI credit-bureau API integration, and a Node.js backend querying a **6M-row** scoring dataset.
- Made AI coding agents a team-level capability: wrote the **project rules for Claude Code** (architecture conventions, style, security guardrails), built **custom MCP servers** exposing the database schema, task tracker, and documentation to agents, cutting typical CRUD delivery from **~2 h to ~40 min**.
- Designed and built the delivery and observability stack the team ships on: **GitLab CI/CD into a 5-node self-managed Kubernetes cluster**, OpenTelemetry distributed tracing, and Grafana alerting.

Appbooster — Full-Stack Engineer (contract)

Nov 2023 – Aug 2024 • 10 mos • Remote

Mobile-app marketing platform: ~100 employees, 10,000+ apps promoted for clients in 26 countries.

- Made **100% of payouts auditable** and screened out duplicate and faked proofs by modelling the full task lifecycle from pick-up to payout behind a moderation queue with anti-fraud rules, processing **hundreds of completions a day**.
- Grew the task-and-rewards product to **1,000 daily active users in 3 months** by owning the full cycle: React user dashboard for paid tasks and proof submission, chatbot re-engagement notifications, and a live verification queue for admins.

SODA — Full-Stack Engineer

Aug 2022 – Oct 2023 • 1 yr 3 mos • Remote

Lead-generation agency for residential developers and law firms (~60 employees). Owned the client-server side: APIs, database, interfaces.

- Migrated a legacy PHP monolith to **Node.js/TypeScript microservices** (Express, PostgreSQL): service decomposition, business-logic and API migration, establishing isolated containerized services.
- **Cut LLM API costs 10×** by designing a confidence-based model cascade: a fast, cheap model handles routine leads and escalates to a stronger model only on low confidence.
- **Tripled monthly channel revenue from ~\$47K to ~\$141K** and cut lead response time from ~8 min to **under 30 s** by leading the AI lead-processing assistant across a 3-month controlled trial.
- Built an internal **React integration hub** linking the agency's CRM with external partner CRM systems, managing API contracts, data mappings, and bidirectional synchronization across distributed endpoints.

OPEN-SOURCE PROJECT

vk-ai-bot-platform (MIT) — multi-tenant AI chatbot platform: OpenRouter LLM API, per-community prompt versioning, token-aware context windows, multi-step re-engagement workflows on BullMQ, event deduplication, admin analytics. TypeScript, Fastify, Drizzle ORM, PostgreSQL, Redis, React, Docker Compose, GitHub Actions.

SKILLS

Languages: TypeScript, JavaScript (ES6+), Node.js, SQL

Backend & Distributed Systems: Node.js, NestJS, Express, Fastify, microservices architecture, REST APIs, GraphQL, WebSocket, distributed systems, API design, event-driven architecture, domain-driven design, system design, OWASP Top 10

Data & Infrastructure: PostgreSQL (query and index optimisation, profiling), Redis, Apache Kafka, BullMQ, Docker, Kubernetes, AWS (EC2, S3, networking, deploy), GitLab CI/CD, GitHub Actions, OpenTelemetry, Grafana

AI Engineering & Workflows: Claude Code (project rules, agentic pre-review), MCP (Model Context Protocol) custom servers, AI agents, LLM integration (Anthropic API, OpenAI API, OpenRouter), model cascading and routing, cost/latency optimisation

Testing & Process: Vitest, Jest, Supertest, Playwright (E2E), code review, technical documentation, mentoring, Agile/Scrum

EDUCATION & LANGUAGES

Southern Federal University — Applied Informatics, 2022–2024

English — professional working proficiency (daily in a distributed team) • Russian — native
