SUMMARY

Senior Full Stack Engineer with 4+ years architecting and shipping revenue-critical products across TypeScript, Node.js (NestJS, Express), React, and PostgreSQL. Led a 3-engineer team to launch a credit-report product that turned profitable in its first week (+40% net profit) over a 6M-row scoring dataset, and cut load times on a 100K-row table from 8 s to under 1 s through database profiling and index optimization. Uses AI coding agents daily as an integral engineering capability: authored project rules for Claude Code, built custom MCP servers, established agentic pre-review stages, and reduced typical CRUD module delivery with tests from ~2 h to ~40 min.

EXPERIENCE

Alfa-Dengi via GIDFINANCE — Senior Full-Stack Engineer • Tech Lead

Sep 2024 – Present • 2 yrs • Remote

Consumer-lending marketplace with 9K+ new leads a day. Cross-functional product team; contract engagement via GIDFINANCE.

- Launched a credit-report product that **turned profitable in its first week** (net profit +40%, EPC doubled from ~\$1.9 to ~\$3.8) by leading a 3-engineer team through technical design, user flows, the API contract, the NBKI credit-bureau integration and a Node.js backend querying a **6M-row** scoring dataset.
- Made AI coding agents a team-level capability: wrote the **project rules for Claude Code** (architecture conventions, security guardrails), built **custom MCP servers** exposing the database schema, task tracker, and documentation to agents, added an agentic pre-review stage, and trained the team, cutting delivery of a typical CRUD module with tests from **~2 h to ~40 min**.
- Enabled marketers to launch automated push campaigns **with zero engineering involvement** (~\$80K/month generated) by building a status-driven campaign builder on NestJS and React with per-status frequency caps and daily limits.
- Cut load time of a 100K-row lead-scoring table (9K+ new leads/day) from **8 s to under 1 s** by reworking the data-access path: server-side pagination, PostgreSQL query and index optimisation, and caching.
- **Eliminated notification loss** under peak load by moving notification delivery and domain-event processing to **Apache Kafka**; application-status updates reach the UI over **WebSocket**.

Appbooster — Full-Stack Engineer (contract)

Nov 2023 – Aug 2024 • 10 mos • Remote

Mobile-app marketing platform: ~100 employees, 10,000+ apps promoted for clients in 26 countries.

- Grew the task-and-rewards product to **1,000 daily active users in 3 months** by owning the full cycle: React user dashboard for paid tasks and proof submission, chatbot re-engagement notifications and the admin verification queue.
- Made **100% of payouts auditable** and screened out duplicate and faked proofs by modelling the full task lifecycle from pick-up to payout behind a moderation queue with anti-fraud rules, processing **hundreds of completions a day**.

SODA — Full-Stack Engineer

Aug 2022 – Oct 2023 • 1 yr 3 mos • Remote

Lead-generation agency for residential developers and law firms (~60 employees). Owned the client-server side: APIs, database, interfaces.

- **Tripled monthly channel revenue from ~\$47K to ~\$141K** and cut lead response time from ~8 min to **under 30 s** by leading an AI lead-processing assistant and conducting a 3-month controlled comparison (humans / humans + AI / AI only) that moved the channel fully to AI.
- **Cut cost per processed lead 10×** by designing an LLM model cascade: a cheap model handles routine leads and escalates to a stronger model only on low confidence.
- Migrated a legacy PHP monolith to **Node.js/TypeScript microservices** (Express, PostgreSQL): service decomposition, business-logic migration, and REST API contract design.
- Lifted conversion **~1.5×** on SPA sites receiving paid ad traffic by raising Lighthouse Performance from **58 to 87** through Core Web Vitals work.

OPEN-SOURCE PROJECT

vk-ai-bot-platform (MIT) — multi-tenant AI chatbot platform: OpenRouter LLM API, per-community prompt versioning, token-aware context windows, multi-step re-engagement workflows on BullMQ, event deduplication, admin analytics. TypeScript, Fastify, Drizzle ORM, PostgreSQL, Redis, React, Docker Compose, GitHub Actions.

SKILLS

Languages & Core: TypeScript, JavaScript (ES6+), Node.js, SQL

Backend & Architecture: NestJS, Express, Fastify, REST APIs, GraphQL, WebSocket, Prisma ORM, microservices, event-driven architecture, domain-driven design, system design, API contracts

Frontend: React, Next.js, Redux Toolkit, Ant Design, Feature-Sliced Design, Vite, Webpack, Core Web Vitals, Lighthouse

AI & Developer Tooling: Claude Code (project rules, conventions, guardrails), custom MCP servers, agentic pre-review, prompt engineering, model cascading, LLM APIs (Anthropic, OpenAI, OpenRouter), AI code review

Data & Infrastructure: PostgreSQL (query and index optimisation), Redis, Apache Kafka, BullMQ, Docker, Kubernetes, AWS, GitLab CI/CD, GitHub Actions, OpenTelemetry, Grafana

Testing & Processes: Playwright (E2E), Vitest, Jest, Supertest, code review, technical documentation, mentoring, Agile/Scrum

EDUCATION & LANGUAGES

Southern Federal University — Applied Informatics, 2022–2024

English — professional working proficiency (daily in a distributed team) • Russian — native
