SUMMARY

I build web applications with React, TypeScript, and Node.js in product teams. Experienced in technical leadership, API design, and CI/CD on credit and scoring products in fintech. I close features end to end, from the backend and database to the interface, and take them to production fast. I actively bring AI agents into the development process: set up MCP servers and trained the team, which sped up feature work. I think in product metrics: business money, conversion, and speed.

EXPERIENCE

Alfa-Bank (Alfa-Dengi project) — Senior Full-Stack Engineer

Sep 2024 – Present · 2 yrs · Remote

Consumer lending product in the ecosystem of one of Russia's largest private banks; delivered via outsourcing partner GIDFINANCE. Cross-functional product team; I ship e2e features from the backend to the interface.

- **Led a 3-person team** delivering an end-to-end credit-report product: owned the technical design, user flows, and API, integrated the NBKI credit-history bureau for scoring and decisioning, and built the Node.js backend with search over a **6M-row** scoring dataset. The product turned profitable in its first week: **net profit +40%, EPC doubled from ~\$1.9 to ~\$3.8**.
- Shipped a feature adjusting the microloan-brand showcases to each user's loan history, increasing the number of approvals.
- Developed a push-campaign builder on NestJS and React, letting marketers launch automated sends by application status **without developer involvement** — campaigns run through it generate **~\$80K/month**.
- Brought Claude into the project, set up MCP servers, and trained colleagues to use AI agents, raising the team's productivity.
- Cut load time of a 100,000-row lead-scoring table (9K+ leads a day) from **8 seconds to under 1 second**.
- Eliminated message loss at peak load by moving notification delivery and domain-event processing to **Apache Kafka**.
- Devised and built the code-deployment pipeline: GitLab CI/CD into a Kubernetes cluster, OpenTelemetry tracing, and Grafana alerting.

Appbooster — Full-Stack Engineer (contract)

Nov 2023 – Aug 2024 · 10 mos · Remote

Mobile app marketing platform: about 100 employees, 10,000+ apps promoted for clients across 26 countries.

- Grew the task-and-rewards product from a few dozen to **1,000 daily active users in 3 months**, owning the whole cycle: the React dashboard where users take paid tasks and submit proof, chatbot notifications that bring them back into the product, and the admin verification queue.
- Made every payout verifiable by modelling the full task lifecycle from pick-up to payout, behind a moderation queue processing **hundreds of completions a day** with anti-fraud rules screening out duplicates and faked proofs.
- Launched UTM and referrer parsing of ad traffic alongside activity and return-rate metrics, so paid channels are judged by retained active users.

SODA — Full-Stack Engineer

Aug 2022 – Oct 2023 · 1 yr 3 mos · Remote

Lead-generation agency for residential real-estate developers and law firms: about 60 employees. Owned the client-server side: APIs, database, and interfaces.

- Cut lead response time from about 8 minutes to **under 30 seconds** by leading the AI lead-processing assistant. After a three-month comparison — humans / humans + AI / AI only — the channel moved fully to AI, **tripling revenue from ~\$47K to ~\$141K a month**.
- Designed a cascade of LLM models that **cut cost per processed lead tenfold**, making the fully automated channel viable.
- Rewrote a legacy PHP monolith into **Node.js/TypeScript microservices** (Express, PostgreSQL): service decomposition, migration of business logic and APIs.
- Developed an internal React integration hub linking the agency's CRM with the CRM systems of partner property developers.
- Lifted Lighthouse Performance from **58 to 87** on the SPA sites receiving the agency's paid ad traffic — conversion grew about 1.5 times.

SKILLS

Core: TypeScript, JavaScript (ES6+), Node.js, SQL

AI Engineering: LLM integration, model cascading and routing, cost/latency optimization, AI agents, MCP (Model Context Protocol) — custom servers, agentic code review, AI chatbots, Claude Code

Backend: NestJS, Express, REST APIs, GraphQL, WebSocket, Prisma ORM, microservices, event-driven architecture

Frontend: React, Next.js, Redux Toolkit, Ant Design, Feature-Sliced Design, Vite, Webpack, Core Web Vitals

Data & Infra: PostgreSQL, Redis, Apache Kafka, Docker, Kubernetes (K8s), GitLab CI/CD, OpenTelemetry, Grafana

Testing: Playwright (E2E), Vitest, Jest, Supertest

EDUCATION & LANGUAGES

Southern Federal University — Applied Informatics, 2022–2024

English — professional working proficiency (daily use in a distributed team) · Russian — native
