

# IVAN SHABANOV

Infrastructure Engineer • Kubernetes • AWS • Linux & Docker • CI/CD & Observability

Yerevan, Armenia (GMT+4) • Remote • B2B contract or EOR • Full overlap with EU hours

ivan@ishbnv.dev • +374 77 719 518 • linkedin.com/in/ishbnv • github.com/ishbnv • ishbnv.dev

## SUMMARY

Infrastructure and Platform-focused Senior Engineer with 4+ years building and operating resilient, high-availability systems across Linux, Docker, and Kubernetes. Designed GitLab CI/CD pipelines deploying to self-managed Kubernetes clusters, configured OpenTelemetry distributed tracing and Grafana alerting, and managed AWS cloud infrastructure. Eliminated message loss under peak load by introducing Apache Kafka and scaled services over 6M-row datasets with deep focus on reliability, fault tolerance, and developer tooling automation.

## EXPERIENCE

### Alfa-Dengi via GIDFINANCE — Senior Full-Stack Engineer • Tech Lead

Sep 2024 – Present • 2 yrs • Remote

Consumer-lending platform with 9K+ new leads a day. Cross-functional product team; contract engagement via GIDFINANCE.

- Designed and built the delivery and observability stack the engineering team ships on: **GitLab CI/CD into a 5-node self-managed Kubernetes cluster**, **OpenTelemetry** distributed tracing, and **Grafana** alerting.
- Eliminated notification loss** under peak traffic bursts by migrating notification delivery and domain-event processing to **Apache Kafka**, ensuring fault-tolerant, replayable event streaming.
- Cut query execution time on a 100K-row lead-scoring dataset (9K+ new leads/day) from **8 s to under 1 s** through deep database profiling, server-side pagination, and PostgreSQL query and index optimization.
- Automated delivery and DX across the team: authored **project rules for Claude Code** (architecture conventions, guardrails) and built **custom MCP servers** exposing database schemas and documentation, cutting CRUD module delivery from **~2 h to ~40 min**.
- Led a 3-engineer team to launch a credit-report product that **turned profitable in week one** (net profit **+40%**, EPC doubled from **~\$1.9 to ~\$3.8**) by owning technical design, system architecture, and Node.js backend over a **6M-row** dataset.

### Appbooster — Full-Stack Engineer (contract)

Nov 2023 – Aug 2024 • 10 mos • Remote

Mobile-app marketing platform: ~100 employees, 10,000+ apps promoted for clients in 26 countries.

- Made **100% of payouts auditable** and screened out fraudulent completions by modeling the full task lifecycle behind an asynchronous moderation queue with anti-fraud rules, processing **hundreds of completions a day**.
- Scaled the task-and-rewards platform to **1,000 daily active users in 3 months**, delivering resilient user workflows, automated re-engagement notifications, and real-time administrative verification queues.

### SODA — Full-Stack Engineer

Aug 2022 – Oct 2023 • 1 yr 3 mos • Remote

Lead-generation agency for residential developers and law firms (~60 employees). Owned client-server architecture, APIs, and infrastructure.

- Decomposed a legacy PHP monolith into containerized **Node.js/TypeScript microservices** (Express, PostgreSQL), migrating core business logic and establishing isolated services with automated deployments.
- Cut LLM API infrastructure costs 10×** by designing a confidence-based model cascade: a lightweight model processes routine requests and escalates to a heavy model only when confidence drops.
- Tripled monthly channel revenue from ~\$47K to ~\$141K** and slashed lead response time from ~8 min to **under 30 s** by delivering an automated AI processing assistant with real-time customer communication.

## OPEN-SOURCE PROJECT

**vk-ai-bot-platform** (MIT) — multi-tenant AI chatbot platform: OpenRouter LLM API, token-aware context windows, multi-step re-engagement on BullMQ, event deduplication, PostgreSQL, Redis, Docker Compose, GitHub Actions.

## SKILLS

**Cloud & Container Platforms:** Kubernetes (production cluster operation), AWS (EC2, S3, VPC networking, security groups, deployment), Docker, Docker Compose, Linux (Ubuntu, Amazon Linux), containerization, high availability

**CI/CD & Observability:** GitLab CI/CD, GitHub Actions, OpenTelemetry (distributed tracing), Grafana (alerting & dashboards), incident response, postmortems, log analysis, capacity planning

**Data & Event Streaming:** Apache Kafka (event-driven architecture, high throughput, zero message loss), PostgreSQL (query & index tuning, performance profiling), Redis, BullMQ

**Backend & Systems:** Node.js, TypeScript, NestJS, Express, Fastify, REST APIs, GraphQL, WebSocket, microservices decomposition, system design, network protocols, OWASP Top 10

**Automation & Tooling:** Claude Code (project rules & automation), MCP (Model Context Protocol) custom servers, developer tooling, Git (workflows, code reviews), bash/shell scripting

## EDUCATION & LANGUAGES

Southern Federal University — Applied Informatics, 2022–2024

English — professional working proficiency (daily in a distributed team) • Russian — native
