SUMMARY

Senior Site Reliability Engineer with 4+ years designing, building, and operating high-availability infrastructure across Kubernetes, AWS, and Linux. Built production delivery and observability stacks: designed GitLab CI/CD pipelines deploying to a 5-node self-managed Kubernetes cluster, configured OpenTelemetry distributed tracing and Grafana alerting to catch regressions before live impact, and eliminated message drops under peak traffic by migrating domain events to Apache Kafka. Pioneers AI-assisted reliability engineering: authored project rules and reusable skills for Claude Code, built custom MCP servers exposing database schemas and documentation to agents, and established automated pre-review guardrails that cut routine task delivery with tests from ~2 h to ~40 min.

EXPERIENCE

Alfa-Dengi via GIDFINANCE — Senior Full-Stack Engineer • Tech Lead

Sep 2024 – Present • 2 yrs • Remote

Consumer-lending marketplace with 9K+ new leads a day. Cross-functional product team; contract engagement via GIDFINANCE.

- Designed and built the delivery and observability stack the engineering team ships on: **GitLab CI/CD into a 5-node self-managed Kubernetes cluster**, OpenTelemetry distributed tracing, and Grafana alerting.
- Built production AI-agent automation across engineering: authored **project rules and reusable skills for Claude Code**, developed **custom MCP servers** exposing database schemas and documentation to agents, and established an agentic pre-review stage, cutting typical CRUD module delivery with tests from **~2 h to ~40 min**.
- Eliminated notification loss** under peak load by moving notification delivery and domain-event processing to **Apache Kafka**, establishing fault-tolerant, replayable event streaming with live status updates delivered over **WebSocket**.
- Cut load time of a 100K-row lead-scoring table (9K+ new leads/day) from **8 s to under 1 s** by profiling query execution, implementing server-side pagination, and tuning PostgreSQL queries and indexes.
- Launched a credit-report product that **turned profitable in its first week** (net profit +40%, EPC doubled from **~\$1.9 to ~\$3.8**) by leading a 3-engineer team through technical design, API contracts, and an external bureau integration over a **6M-row** dataset.

Appbooster — Full-Stack Engineer (contract)

Nov 2023 – Aug 2024 • 10 mos • Remote

Mobile-app marketing platform: ~100 employees, 10,000+ apps promoted for clients in 26 countries.

- Made **100% of payouts auditable** and screened out duplicate and faked proofs by modelling the full task lifecycle from pick-up to payout behind a moderation queue with anti-fraud rules, processing **hundreds of completions a day**.
- Grew the task-and-rewards product to **1,000 daily active users in 3 months** by owning the full cycle: React user dashboard for paid tasks and proof submission, chatbot re-engagement notifications and a live admin verification queue.

SODA — Full-Stack Engineer

Aug 2022 – Oct 2023 • 1 yr 3 mos • Remote

Lead-generation agency for residential developers and law firms (~60 employees). Owned the client-server side: APIs, database, interfaces.

- Migrated a legacy PHP monolith to containerized **Node.js/TypeScript microservices** (Express, PostgreSQL) on Linux: service decomposition, business-logic migration, and REST API contract design.
- Cut cost per processed lead 10×** by designing an LLM model cascade: a cheap model handles routine leads and escalates to a stronger model only on low confidence.
- Tripled monthly channel revenue from ~\$47K to ~\$141K** and cut lead response time from ~8 min to **under 30 s** by leading an AI lead-processing assistant and conducting a 3-month controlled comparison (humans / humans + AI / AI only) that moved the channel fully to AI.

OPEN-SOURCE PROJECT

vk-ai-bot-platform (MIT) — multi-tenant AI chatbot platform: OpenRouter LLM API, token-aware context windows, multi-step re-engagement workflows on BullMQ, event deduplication, PostgreSQL, Redis, Docker Compose, GitHub Actions.

SKILLS

Reliability, Platform & Kubernetes: Kubernetes (self-managed cluster operation, pod lifecycle), Docker, Docker Compose, Linux (Ubuntu, Amazon Linux), containerization, high availability, fault tolerance, incident response

Observability & Telemetry: OpenTelemetry (distributed tracing), Grafana (alerting and dashboards), logging, metrics, SLIs/SLOs, incident root-cause analysis, postmortems

AI-Assisted SRE & Tooling: Claude Code (project rules, reusable skills, guardrails), custom MCP servers, agentic workflows, prompt engineering, developer automation, Git (workflows, code reviews), technical documentation

Cloud, CI/CD & Networking: AWS (EC2, S3, VPC networking, security groups, deployment), GitLab CI/CD, GitHub Actions

Distributed Systems & Data: Apache Kafka (event streaming, zero message loss), PostgreSQL (query and index optimisation), Redis (caching, data structures), BullMQ, Node.js, TypeScript, REST APIs, microservices, system design

EDUCATION & LANGUAGES

Southern Federal University — Applied Informatics, 2022–2024

English — professional working proficiency (daily in a distributed team) • Russian — native
