SUMMARY

Senior Software Engineer in Test with 4+ years architecting multi-layered quality systems, automated testing frameworks, and developer tooling across TypeScript, Node.js, and PostgreSQL. Established an automated quality and delivery pipeline at Alfa-Dengi: integrated agentic pre-review with Claude Code and custom MCP servers, cutting cycle time for tested modules from ~2 h to ~40 min while ensuring clean PR handoffs. Designed performance testing and data-validation systems across high-load services: cut lead table latency from 8 s to under 1 s, modeled an asynchronous moderation queue guaranteeing 100% auditable payouts, and verified API contracts across external bureau integrations over a 6M-row dataset. Bridges testing and infrastructure through Playwright E2E suites, integration testing, OpenTelemetry tracing, and automated CI/CD pipelines.

EXPERIENCE

Alfa-Dengi (Alfa-Bank ecosystem) via GIDFINANCE — Senior Full-Stack Engineer · Tech Lead

Sep 2024 – Present · 2 yrs · Remote

Consumer lending product in the ecosystem of one of Russia's largest private banks; delivered via outsourcing partner GIDFINANCE. Cross-functional product team; I ship e2e features from the backend to the interface.

- Turned automated testing and AI tooling into a daily team capability: wrote **project rules for Claude Code**, built **custom MCP servers** over database schemas and task trackers, and introduced an **agentic pre-review stage** ahead of human code review, reducing delivery time for verified CRUD modules with tests from **~2 h to ~40 min**.
- Led technical design and API contract testing for a 3-engineer team integrating external NBKI credit bureau endpoints over a **6M-row** scoring dataset, launching a credit product that **turned profitable in its first week** (net profit **+40%**, EPC doubled from **~\$1.9 to ~\$3.8**).
- Cut load time of a 100K-row lead-scoring table (9K+ new leads/day) from **8 s to under 1 s** by establishing performance testing benchmarks, tuning PostgreSQL indexes, and implementing server-side pagination with client-side row virtualization.
- Enabled marketers to launch automated push campaigns **with zero engineering involvement (~\$80K/month generated)** by building an internal status-driven builder on NestJS and React with strict schema validation.
- Designed and built the automated delivery and observability stack the team ships on: **GitLab CI/CD into Kubernetes**, OpenTelemetry tracing, and Grafana alerting for rapid defect localization and signal quality.

Appbooster — Full-Stack Engineer (contract)

Nov 2023 – Aug 2024 · 10 mos · Remote

Mobile-app marketing platform: ~100 employees, 10,000+ apps promoted for clients in 26 countries.

- Made **100% of payouts auditable** and screened out duplicate and faked proofs by architecting automated validation rules and an asynchronous moderation queue, processing **hundreds of completions a day**.
- Maintained high test coverage across user task submission and admin verification flows, enabling the task-and-rewards product to scale to **1,000 daily active users in 3 months**.

SODA — Full-Stack Engineer

Aug 2022 – Oct 2023 · 1 yr 3 mos · Remote

Lead-generation agency for residential developers and law firms (~60 employees). Owned the client-server side: APIs, database, interfaces.

- Migrated a legacy PHP monolith to **Node.js/TypeScript microservices** (Express, PostgreSQL), establishing service decomposition boundaries and automated REST API contract testing.
- Tripled monthly channel revenue from ~\$47K to ~\$141K** and cut lead response latency from ~8 min to **under 30 s** by establishing rigorous evaluation metrics across a 3-month controlled test (humans / humans + AI / AI only).
- Cut cost per processed lead 10×** by designing an LLM model cascade: a cheap model handles routine leads and escalates to a stronger model only on low confidence.
- Lifted conversion **~1.5×** on SPA sites receiving paid ad traffic by raising Lighthouse Performance from **58 to 87** through Core Web Vitals profiling and bundle optimization.

OPEN-SOURCE PROJECT

vk-ai-bot-platform (MIT) — multi-tenant AI chatbot platform: OpenRouter LLM API, per-community prompt versioning, token-aware context windows, multi-step re-engagement workflows on BullMQ, event deduplication, admin analytics. TypeScript, Fastify, Drizzle ORM, PostgreSQL, Redis, React, Docker Compose, GitHub Actions CI/CD.

SKILLS

Quality Systems & Automated Testing: Playwright (E2E), Vitest, Jest, Supertest, Cypress, React Testing Library, integration testing, contract testing, performance testing, test data validation, chaos and resilience testing

AI Tooling & Developer Velocity: Claude Code (project rules, conventions, guardrails), custom MCP servers, agentic pre-review workflows, AI-assisted code reviews, prompt engineering, model cascading

Languages & Core: TypeScript, JavaScript (ES6+), Node.js, SQL

Backend & Architecture: Node.js, NestJS, Express, Fastify, REST APIs, GraphQL, WebSocket, microservice architecture, API design and contracts, Prisma ORM, event-driven systems

Data & Infrastructure: PostgreSQL (schema design, query and index optimisation), Redis, Apache Kafka, BullMQ, Docker, Kubernetes, AWS, GitLab CI/CD, GitHub Actions, OpenTelemetry, Grafana

Processes & Leadership: code reviews, mentoring and direct guidance, defect triage and root-cause analysis, observability, cross-functional collaboration with Product and Design, Agile/Scrum

EDUCATION & LANGUAGES

Southern Federal University — Applied Informatics, 2022–2024

English — professional working proficiency (daily in a distributed team) · Russian — native
