SUMMARY

Senior Frontend Developer with 4+ years architecting data-intensive web applications, complex UI systems, and interactive interfaces across React, TypeScript, and Redux Toolkit. Built a visual workflow builder on React with normalized Redux state and immutable updates generating ~\$80K/month with zero engineering involvement, and grew a task platform to 1,000 DAU in 3 months via an optimistic-update dashboard and live verification queue. Cut load times on a 100K-row database table from 8 s to under 1 s by pairing server-side pagination with client-side DOM row virtualization and re-render profiling. Delivers high-performance frontend architecture with Core Web Vitals optimization (Lighthouse 58 to 87), real-time WebSocket data streaming, and automated Playwright testing suites.

EXPERIENCE

Alfa-Dengi (Alfa-Bank ecosystem) via GIDFINANCE — Senior Full-Stack Engineer · Tech Lead

Sep 2024 – Present · 2 yrs · Remote

Consumer lending product in the ecosystem of one of Russia's largest private banks; delivered via outsourcing partner GIDFINANCE. Cross-functional product team; I ship e2e features from the backend to the interface.

- Enabled marketers and operations to launch automated campaigns **with zero engineering involvement (~\$80K/month generated)** by building a visual canvas editor on React and NestJS with drag-and-drop steps, normalized Redux Toolkit state, undo/redo, and auto-save.
- Cut load time of a 100K-row lead-scoring table (9K+ new leads/day) from **8 s to under 1 s** by profiling frontend rendering and reworking the data path: client-side DOM row virtualization, server-side pagination, and PostgreSQL index tuning.
- Launched a credit-report product that **turned profitable in its first week** (net profit +40%, EPC doubled from ~\$1.9 to ~\$3.8) by leading a 3-engineer team across frontend user flows, API contracts, and an NBKI scoring backend over a **6M-row** dataset.
- Eliminated notification loss** under peak load by moving domain events to **Apache Kafka**; application statuses and live updates stream directly to the React UI over **WebSocket**.
- Turned AI coding tools into a team capability: wrote **project rules for Claude Code** and built **custom MCP servers**, cutting typical module delivery with tests from ~2 h to ~40 min.

Appbooster — Full-Stack Engineer (contract)

Nov 2023 – Aug 2024 · 10 mos · Remote

Mobile-app marketing platform: ~100 employees, 10,000+ apps promoted for clients in 26 countries.

- Grew the task-and-rewards product to **1,000 daily active users in 3 months** by owning the full cycle: React user dashboard with normalized store and optimistic state updates, proof submission flows, and a live admin verification queue.
- Made **100% of payouts auditable** and screened out duplicate and faked proofs by modelling the full task lifecycle from pick-up to payout behind an admin moderation queue, processing **hundreds of completions a day**.

SODA — Full-Stack Engineer

Aug 2022 – Oct 2023 · 1 yr 3 mos · Remote

Lead-generation agency for residential developers and law firms (~60 employees). Owned the client-server side: APIs, database, interfaces.

- Lifted conversion ~1.5× on SPA sites receiving paid ad traffic by raising Lighthouse Performance from **58 to 87** through Core Web Vitals profiling, bundle size reduction, and asset optimization.
- Migrated a legacy PHP monolith to **Node.js/TypeScript microservices** (Express, PostgreSQL), designing modular REST API contracts for frontend consumption.
- Tripled monthly channel revenue from ~\$47K to ~\$141K** and cut lead response time from ~8 min to **under 30 s** with an AI assistant operating in real time; settled via a 3-month controlled test.
- Cut cost per processed lead 10×** by designing an LLM model cascade: a cheap model handles routine leads and escalates to a stronger model only on low confidence.

OPEN-SOURCE PROJECT

vk-ai-bot-platform (MIT) — multi-tenant AI chatbot platform: OpenRouter LLM API, per-community prompt versioning, token-aware context windows, multi-step re-engagement workflows on BullMQ, event deduplication, admin analytics. TypeScript, Fastify, Drizzle ORM, PostgreSQL, Redis, React, Docker Compose, GitHub Actions.

SKILLS

Frontend Architecture & State Management: React (hooks, composition), TypeScript, Next.js, Redux Toolkit, component architecture, state management, re-render control, DOM virtualization, data-intensive views, Vite, Webpack

Performance & Styling: performance optimization, Core Web Vitals, Lighthouse profiling, bundle size reduction, HTML5, CSS3, modern styling approaches, Ant Design, Mantine, Feature-Sliced Design

Languages & Core: TypeScript, JavaScript (ES6+), HTML5, CSS3, Node.js, SQL

Backend & Real-Time APIs: REST APIs, GraphQL, WebSocket streaming, Node.js, NestJS, Express, microservices, API contracts and integration, Prisma ORM

Data & Infrastructure: PostgreSQL, Redis, Apache Kafka, BullMQ, Docker, Kubernetes, AWS, GitLab CI/CD, GitHub Actions, OpenTelemetry, Grafana

Testing & Process: Playwright (E2E), Vitest, Jest, React Testing Library, testing, code reviews, mentoring, technical documentation, Agile/Scrum

EDUCATION & LANGUAGES

Southern Federal University — Applied Informatics, 2022–2024

English — professional working proficiency (daily in a distributed team) · Russian — native
